

ABSTRACT OF THE DISCLOSURE

The applique film airbag cover includes a substrate and an applique film. The substrate includes a tear seam to permit the emergence of a contained inflatable cushion.

The applique film is disposed on an exposed surface of the substrate and is disposed

across at least one tear seam in the substrate. The substrate may include contours that can be aligned with an emblem design on the applique film to produce a three-dimensional emblem. In response to expansion of the contained cushion, the tear seam and applique film rupture to permit the cushion to emerge through the cover.
